ZERO TO ROOT TRAINING

YOUR PATH FROM SYSTEM ADMIN TO DEVOPS READY

From Linux System Administration fundamentals to DevOps practical mastery. This comprehensive training transforms beginners into job-ready professionals.

- Real-world practical skills
- Instructor-led live training
- No prior experience required

WHAT YOU'LL LEARN – CORE SKILLS OVERVIEW

- Linux Core (RHCSA Mindset)
- Linux Fundamentals & CLI Mastery
- User, Permission & Process Management
- Storage, Services & System Operations
- DevOps Foundation & Lifecycle
- Git & Version Control Basics

- Automation & Scripting
- Bash Scripting Fundamentals
- Linux Networking Essentials
- Containers (Docker / Podman)
- Troubleshooting & Production Scenarios
- Data Center & Enterprise Overview

DETAILED COURSE CURRICULUM

01

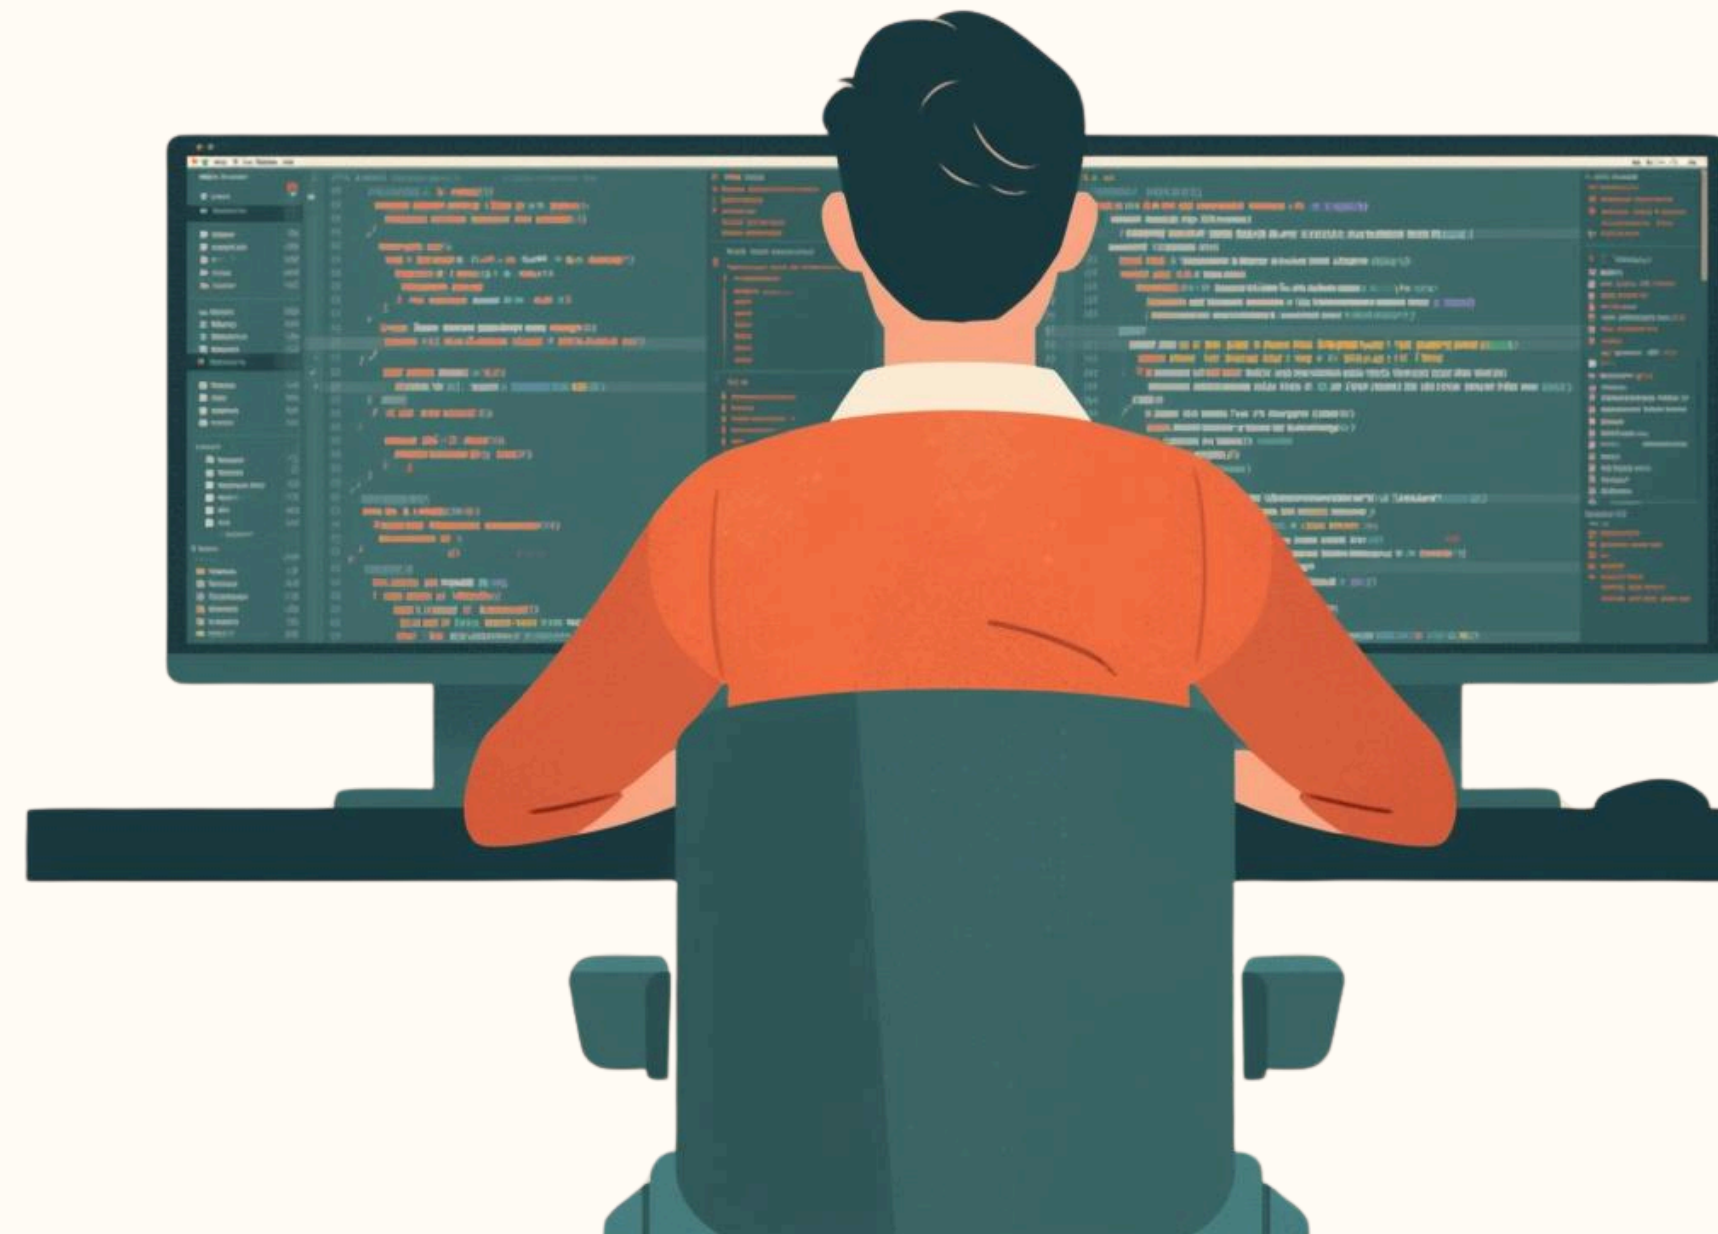

Module 01: Installation & Registration

Learn to install Red Hat Enterprise Linux, configure system settings, and register with repositories. Master the foundational setup skills every Linux administrator needs.

02

Module 02: Basic Commands & Shell Scripting

Master essential CLI commands and bash scripting fundamentals. Build the command-line confidence required for efficient system administration and automation.

DETAILED COURSE CURRICULUM

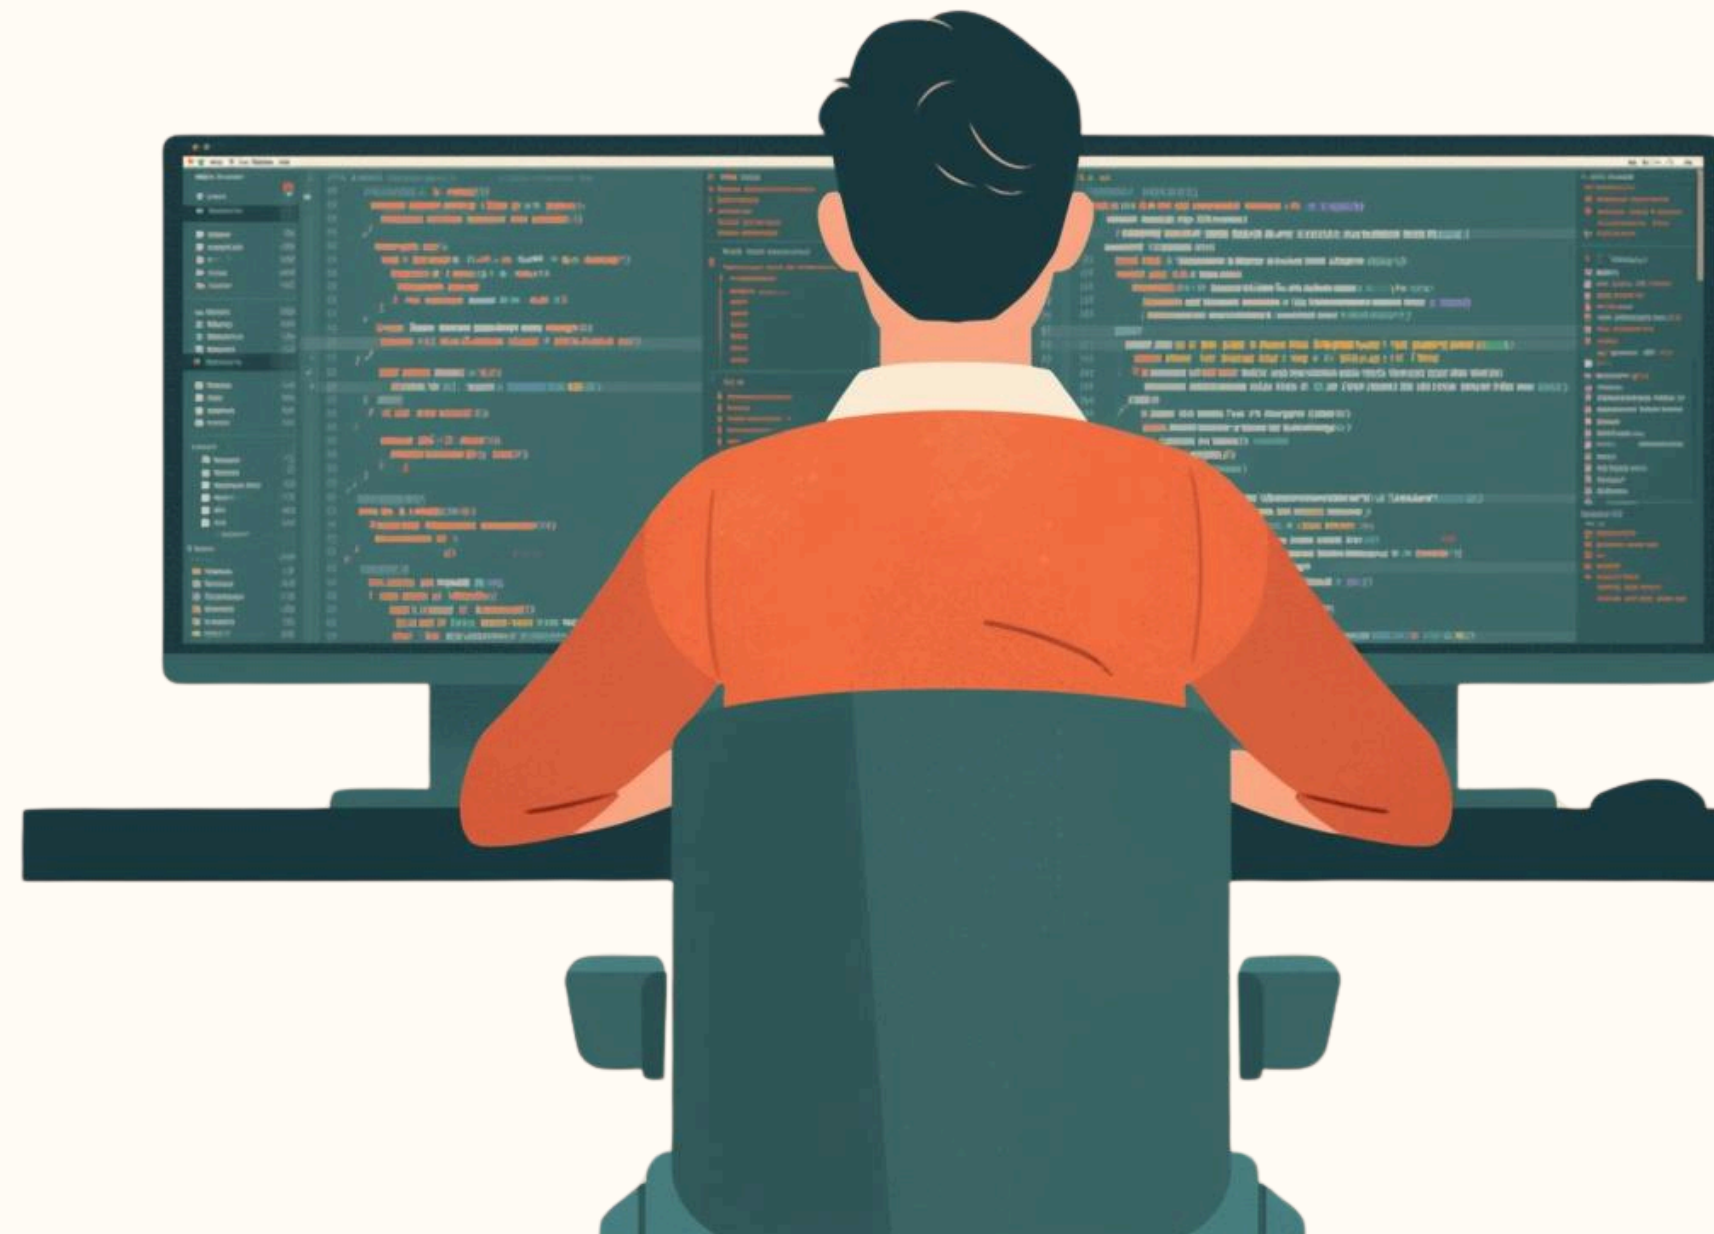

ZERO TO ROOT TRAINING

03

Module 03: User & Group Management
User/Group Creation & Management
Permissions & Access Control

04

Module 04: Task Automation
Cron Jobs & Scheduling
Automation Use Cases

DETAILED COURSE CURRICULUM

MODULES 5-8

ZERO TO ROOT TRAINING

05

Module 05: Service Management

Master systemd service control, understand the Linux boot process, enable/disable services, and manage system targets for enterprise environments.

Module 06: Archiving & Compression

Learn tar, gzip, and bzip2 for file archiving. Implement backup strategies and data compression techniques for system administration.

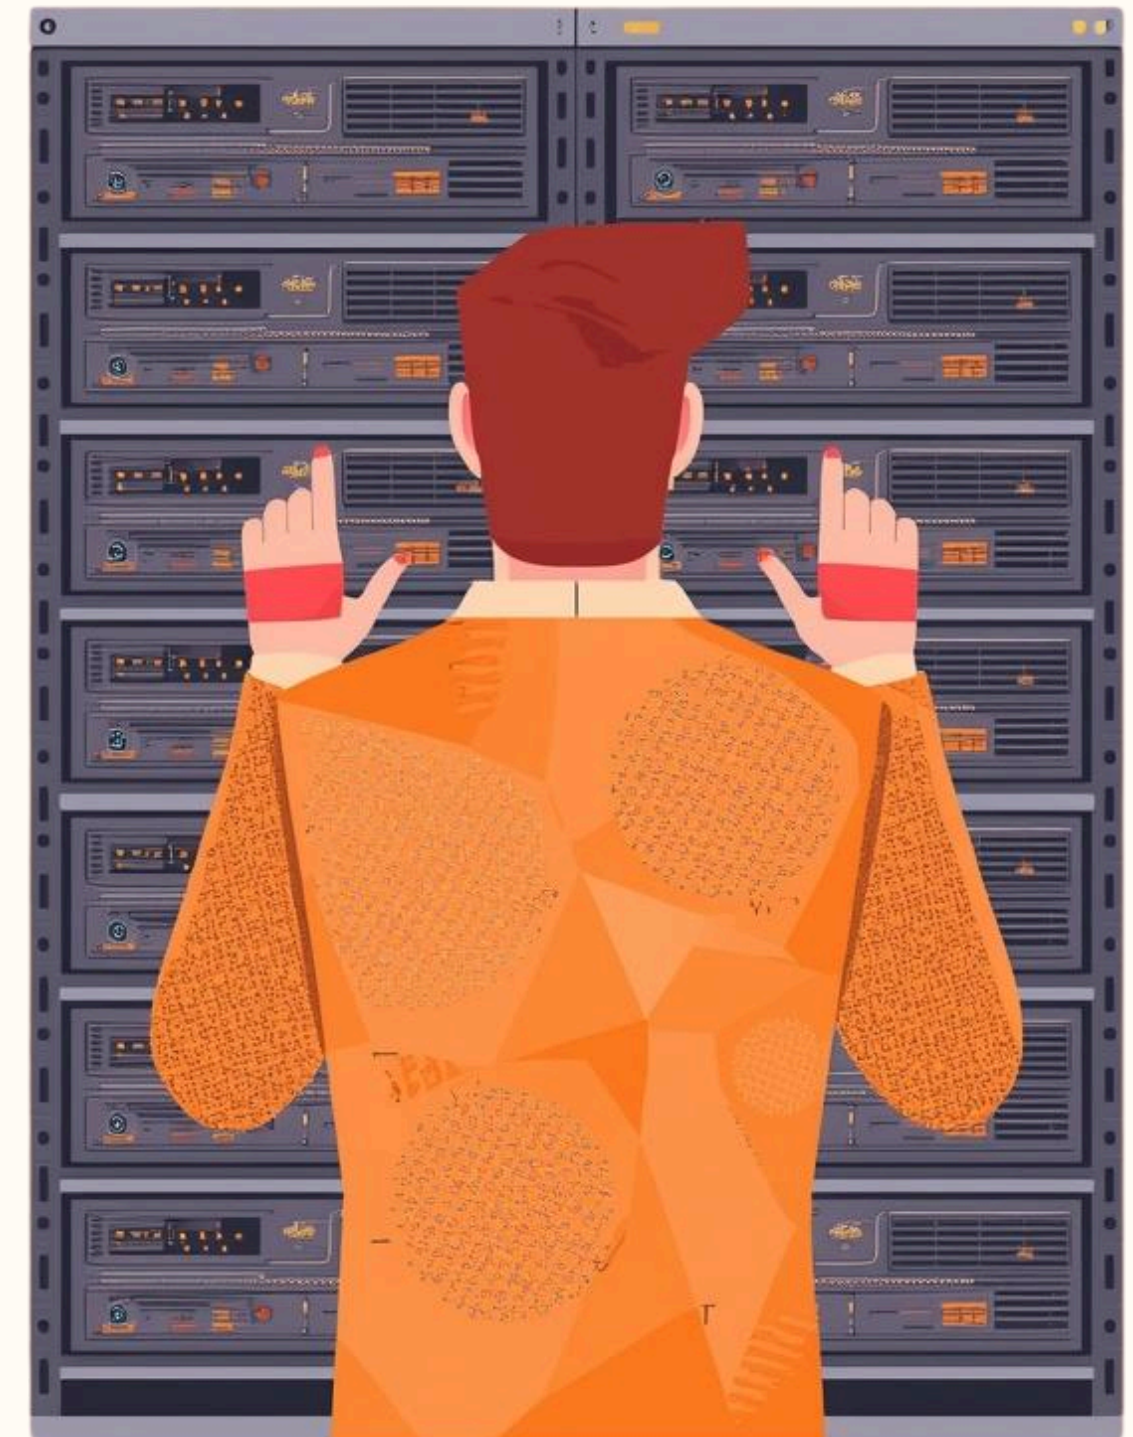

Module 07: NFS & Autofs

Configure Network File System (NFS) shares, implement autofs for automatic mounting, and manage network-based storage access across systems.

Module 08: Storage Management

Master LVM (Logical Volume Management), disk partitioning, filesystem creation, and storage expansion for flexible enterprise storage solutions.

07

DETAILED COURSE CURRICULUM

MODULES 9-12

09

Container Management

Master Podman and Docker basics for containerized application deployment. Learn to create, manage, and orchestrate containers in development and production environments.

10

BaseOS & AppStream Repositories

Understand RHEL package management with BaseOS and AppStream repos. Learn to install, update, and manage software modules and application streams.

ZERO TO ROOT

DETAILED COURSE CURRICULUM

MODULES 9-12

11

Module 11: Networking
IP Configuration & Troubleshooting
Firewall & Network Services

12

Module 12: Root Password Reset
Boot Recovery Mode
System Rescue Techniques
